LOGISTIC SOLUTIONS FOR AMAZON & TIKTOK
SHOP SELLERS

**Optimizing Success: The
Role of a Logistic
Preparation Center for
Amazon & TikTk Shop
Sellers.**

INTRODUCTION

In the ever-evolving world of e-commerce, efficient logistics can make or break an Amazon seller's success.

A well-organized logistic preparation center (LPC) is the backbone of many successful Amazon businesses, ensuring that products are ready for fulfillment by Amazon's rigorous standards.

WHAT IS A LOGISTIC PREPARATION CENTER (LPC)?

- A facility that specializes in preparing products for shipment to Amazon fulfillment centers.
- Ensures compliance with Amazon's strict packaging, labeling, and quality control requirements.

CORE FUNCTIONS OF A LOGISTIC PREPARATION CENTER

- Inspection and Quality Control: Verifying product condition and adherence to Amazon's guidelines.
- Labeling and Packaging: Correct labeling (e.g., FNSKU labels) and preparation for efficient shipping.
- Bundling and Kitting: Combining products into sets or promotional bundles.
- Inventory Management: Real-time tracking of stock levels to avoid stockouts or overstocking.
- Shipping Preparation: Coordinating with shipping carriers and ensuring shipments meet Amazon FBA requirements.

PLANNING

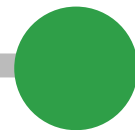

PHASE 1

Product Reception

A thorough inspection is conducted to ensure the products are undamaged, of good quality, and meet any specifications required for sale. This step also includes identifying any discrepancies, such as damaged or incorrect items.

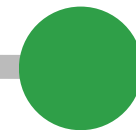

PHASE 2

Sorting and Categorization

Products are sorted based on their SKUs or product categories. This allows for easier handling, labeling, and packaging in the later phases.

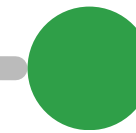

PHASE 3

Labeling and Compliance

Depending on Amazon's requirements, the LPC will label products with necessary identifiers, such as FNSKU (Fulfillment Network Stock Keeping Unit) barcodes. Other required labels may include "sold as set" or "fragile."

PHASE 4

Bundling and Kitting.

If sellers offer product bundles or kits, the LPC prepares these by combining multiple items into one set. This might involve adding additional packaging, creating custom bundles, or combining promotional items.

PLANNING

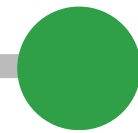

PHASE 5

Quality Control

A final inspection is done to ensure all items are properly labeled, packed, and meet Amazon's guidelines. This step ensures there are no mistakes that could lead to rejected shipments or customer complaints.

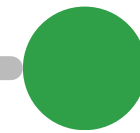

PHASE 6

Shipping Preparation

Products are packed in cartons or pallets according to Amazon's requirements, including using specific box dimensions, weight limits, and labeling the shipment for easier intake by Amazon.

PHASE 7

Dispatch to Fulfillment Centers.

The LPC coordinates with shipping carriers to schedule the pickup and transportation of products to the Amazon Fulfillment Center. Shipping methods may vary depending on volume, such as LTL (Less Than Truckload), FTL (Full Truckload), or small parcel shipments.

PRICING

0 to 1000 units: \$1.20 Prep per unit (Monthly).

1000 to 2500 units: \$1.10 Prep per unit (Monthly).

2500 to 5000 unidades: \$1 Prep per unit (Monthly).
